## **Board questions set 4**

## Problem 1: Variances

- (a) Prove that if  $X \sim \text{Bernoulli}(p)$ , then Var(X) = p(1-p).
- **(b)** Prove that if  $X \sim \text{Bin}(n, p)$ , then Var(X) = np(1 p).
- (c) Suppose  $X_1, X_2, \ldots, X_n$  are independent and all have the same standard deviation  $\sigma = 2$ . Let  $\overline{X}$  be the average of  $X_1, X_2, \ldots, X_n$ . What is the standard deviation of  $\overline{X}$ ?

## **Problem 2: Covariance**

Flip a fair coin 3 times. Let X be the number of heads in the first 2 flips and let Y be the number of heads in the last 2 flips. Compute Cov(X, Y).

## Problem 3: More covariance

Toss a fair coin 2n+t times. Let X be number of heads in the first n+t flips and let Y be number of heads in the last n+t flips. Compute Cov(X,Y) and Cor(X,Y).
